

GLENDALE COMMUNITY COLLEGE

Have you thought about Biotechnology as a Career

GCC offers a Biotechnology Program to train you to work in the Biotechnology industry. This offering has been timed to coincide with the ongoing development of the Genomics industry in the state. I feel sure that you are aware of the construction of the Biomedical campus in downtown Phoenix and the wholesale commitment of state resources to building a biotech industry in the state. These are exciting developments which hold a promise that can only be realized if there is a trained and competent workforce to staff biotechnology laboratories.

The [Associate of Applied Science degree in Biotechnology](#) (65 credits) at GCC will provide the necessary laboratory training along with an attractive internship placement to give students the skills to enter the workforce rapidly. The program will train students for careers as laboratory technicians in such fields as hospital labs, pharmaceuticals, bio-manufacturing, forensics, agriculture and microbiology. Students will be able to obtain superior hands-on laboratory skills as well as critical thinking and troubleshooting skills, allowing immediate entry into the workforce or the option to compete effectively for placement in bachelor's degree programs.

If you are interested in obtaining marketable and cutting-edge skills in a short time-frame, please call me at 623-845-3845.
