

## eGCC Wireless Connecting Using Vista for the First Time User

If you have never used GCC's wireless network before, you may see a screen similar to the one displayed on the left when opening your browser window.

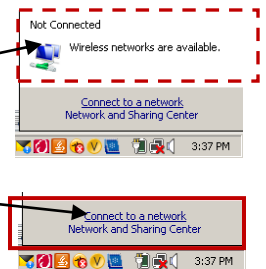

This process below details how to connect to eGCC's wireless network for the first time using Windows Vista. Using this process, Windows Vista will add eGCC to a list and automatically connect to it in the future if it senses it is the most preferred network in range.

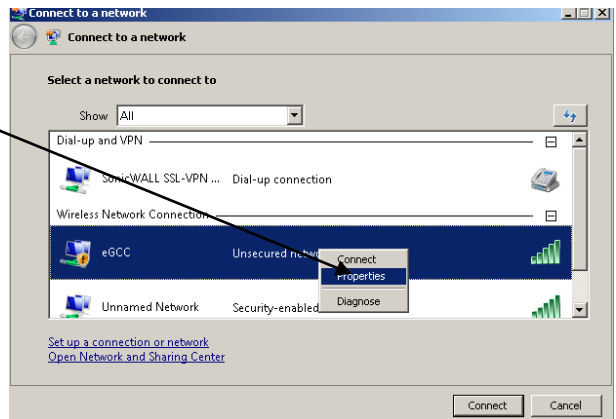

1. Locate the wireless icon.  
(Normally located in the lower right-hand corner of your computer screen.)

- a. Place your mouse over the icon. A pop-up window will indicate that you are **Not Connected – Wireless networks are available.**
- b. Next, click the **Connect to a network** link.

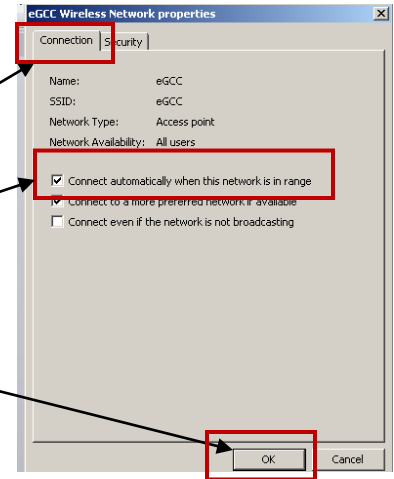

2. When the **Connect to a network** window opens, right-click **eGCC** and select **Properties** from the pop-up menu.

2. cont.

- When the eGCC Wireless Network properties window appears select the **Connection** tab.
- Assure that the **Connect automatically when the network is in range** checkbox is selected.
- Click the **OK** button.

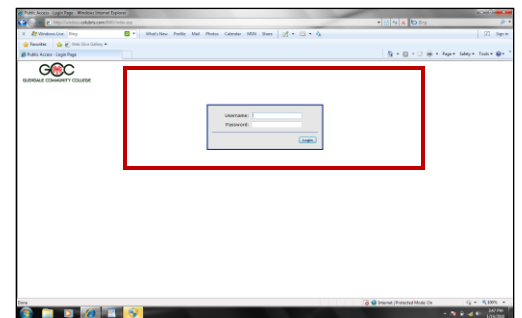

3. When the **Connect to a network** window reappears, select the **Connect** button.

4. Launch your **web browser**.

5. At the login screen, enter your **eGCC username and password**, then click the **Login** button.

6. Upon successful login, you will be presented with a list of links. You may choose from the list or enter the desired url in the web browser's address bar.
