

As an employee you might have access to a legacy department's storage. While most dept storage is on the eGCC "S" drive there is some dept storage on a "T" drive, also known as Glory2/shared. Since this is a legacy system that is very slowly being migrated to the newer systems, there are a few more tricks to gaining access. The following assumes you are accessing the T drive for the first time, if you are an old hand at it skip to the reminder part you need.

1. Ensure you have a T drive (Glory2) account
 2. Sync your Glory2 account with your eGCC account
 3. Map a T drive on your computer
 4. Use it.
-
1. Ensure you have a T drive (Glory2) account
 - o Step 1 and 2 are linked
 - o point a web browser to the Glory2 password synchronization page
<http://glory2.gccaz.edu/>
 - o Login with your eGCC username and password (what you use to access your office computer)
 - o If this is not successful you might not have an account on Glory2, have your supervisor contact the help desk indicating you need access to the dept T drive. It might be good for the supervisor to give an example of another in the dept who had the access needed.
 2. Sync your Glory2 account with your eGCC account
 - o Step 1 and 2 are linked
 - o point a web browser to the Glory2 password synchronization page
<http://glory2.gccaz.edu/>
 - o Login with your eGCC username and password (what you use to access your office computer)
 - o If this is successful the web page will tell you
 3. Map a T drive on your computer
 - o You can do this manually if you prefer but an easy way has been provided. Run the program "\\gccaz.edu\netlogon\scripts\GetT.cmd" Literally copy everything between the quotes and paste it into your Start Menu Run field. This copies a shortcut to your desktop called MapT
 - o Run MapT from your desktop. A T drive will be mapped which shows up in My computer or windows explorer etc.
 - o If you ever lose your T mapping, re-run MapT.
 - o When you change your eGCC password, also re-sync your Glory2 password at
<http://glory2.gccaz.edu/>
 4. Use it.
 - o The T drive is just another storage space for your dept to share.
 - o When your dept T space is migrated to eGCC S drive it will disappear from the T and show up in the S with the same or very similar name, but don't worry, this will not happen with out your dept being notified.
