

STUDY GUIDE
PERCEPTION - CHAPTER 6

1. Explain the difference between and give examples of the three main perceptual constancies (size, shape, brightness)
2. Explain the ground figure relationship and differentiate among the principles of perceptual organization (nearness, similarity, continuity, closure, common region)
3. Outline different stimulus and personal factors influencing perception
4. Definition and explanation of depth perception and its acquisition
5. Identify the eight pictorial cues from the text for judging depth and distance
6. Differentiate between and give examples of an illusion and a hallucination
7. Differentiate between and give examples of selective attention and habituation
8. Describe major factors impacting the accuracy of eyewitness testimony including stress, weapons focus, cross-racial identification and the relationship between accuracy and confidence.
9. Define and differentiate between different types of ESP (clairvoyance, telepathy, channeling, psychokinesis and precognition)
